The fruit is naturally radioactive and the activists use it to demonstrate the uses of uranium.

The group of 16 people – a mix of local residents and activists – gathered on the beach in Leiston in front of the existing nuclear power station Sizewell B for a picnic and swim with huge inflatable bananas.

The protesters played socially-distanced beach volleyball, shared food and displayed pro-nuclear banners on the beach.

Miss Lights said: "We are facing a climate emergency and opposing any low-carbon power source right now is madness.

"I support all positive measures that can contribute to getting the UK to zero carbon in 2035, and it's imperative that these measures are evidence-based rather than ideology-led.

"There are positive solutions we can get behind, and nuclear definitely is one of them."

MORE: Loss of Welsh power station has 'serious ramifications' for Sizewell C, say supporters

EDF Energy's proposal to build Sizewell C, a £20 billion scheme that would create thousands of jobs, has sparked much controversy in the region, with many claiming it would cause great environmental harm to area.

The newly-formed N4NZ group held its first on September 1 in Ipswich and is demanding the government bring forward the UK's legally-binding net zero target from 2050 to 2035, as required by the climate emergency.

It argues this is only possible with a major contribution from nuclear new-build, both to decarbonise the electricity grid and to replace oil with hydrogen in transport and industry.

A planning application for Sizewell C has been submitted by EDF but the government has said it is exploring financing options for the plant after plans were scrapped for a nuclear power station in Wales.

The decision has led to concerns Sizewell C could suffer a similar fate - in which case thousands of jobs would not be created.

Miss Lights hopes to organise more events in support of Sizewell C in the future, in solidarity with Suffolk residents who are fighting for the nuclear power station to be built.
